The Swiss Army Knife for
Network Administrators

**Integrated management
of IT infrastructure**

This modern solution for IT infrastructure management Is a series of benefits for companies and institutions

**WE SUPPLY TOOLS WHICH MAKE
UP THE SWISS ARMY KNIFE FOR
NETWORK ADMINISTRATOR**

We facilitate the operation of IT organizations, and at the same time we respond to the visions and expectations of the management of companies and institutions.
We help them to save time and money and increase work efficiency.

NETWORK

Comprehensive network monitoring

of people responsible for IT in Polish companies believes that the implementation of IT monitoring tools would improve the security level in their organizations.

Report "Security. Risk. Availability.", TNS at the request of HP Poland

Axence nVision® helps me to locate and diagnose problems in the operation of the network and individual machines before their users even know that something is going wrong. I can check in an instant whether the networks in my branches are working without trouble and whether the CPU or memory in any of the machines is overloaded.

NETWORK

Comprehensive network monitoring

WHAT ARE THE BENEFITS OF THE NETWORK MODULE?

- prevention of costly downtimes by detecting the potential failure reasons
- secure server room – humidity and temperature monitoring
- time saving – transparent reports available immediately
- more control over system processes
- better performance of business processes due to comprehensive insight into the operation of crucial services

INVENTORY

The easy management of IT assets (ITAM)

of software installed on corporate machines in 2013 were unlicensed copies. This is often not the result of the bad intent of companies, but rather of the incorrect management of IT licenses and resources.

Business Software Alliance (BSA)

\$ 1 000 000 USD

a company from eastern Poland is liable to pay a fine of 1,000,000 USD after more than 200 illegal applications were found installed on their machines.

Business Software Alliance (BSA)

The most visible change, which has occurred after the deployment of Axence nVision® software, is the time saved through the automation of computer inventory taking – now the IT staff can focus on activities more effective than manual data input.

INVENTORY

The easy management of IT assets (ITAM)

WHAT ARE THE BENEFITS OF THE INVENTORY MODULE?

- improvement in the management of workstations and the easier planning of new resources
- comprehensive control over even the most extensive IT infrastructure
- full list of installed/used software, which means fines are avoided
- reduction in the costs of IT department by detection of redundant licenses (for unused software)
- quick audits from the level of mobile application
- assistance for the accounting department – register of fixed IT assets

USERS

Better security and employee performance

of data leaks is a result of the unauthorized, often the unwitting actions of employees.

B2B International and Kaspersky Lab report

1 hour 11 minutes

Employees spend 1 hour and 11 minutes per day on websites unrelated to their duties. At such times they are more exposed to attack.

Raport TimeCamp

382 million U.S. dollars

is the yearly cost of the time which employees spend on shopping websites whilst at work.

Raport TimeCamp

After the implementation of Axence nVision® software, user awareness concerning the responsible browsing of Web resources and the effective use of computers for professional tasks have grown significantly.

USERS

Better security and employee performance

MORE SECURITY AND LOWER COSTS

- improving the corporate security level: the blocking of dangerous Web domains against accidental opening and malware infection
- protecting employees against phishing messages and APT attacks
- optimizing the work organization – knowledge of the time spent on specific activities enables the improvement of the business processes
- minimizing the cyberslacking and improving the employees' performance
- reducing printing costs

HELPDESK

Intuitive technical support

of all IT events is related to the human factor, where 6% pertains to configuration errors, and the remaining 26% to other employee errors.

Dimension Data report

of companies neglect the need of regular software updates, thus increasing the risk of an attack on the corporate network.

F-Secure report

At any time a user can ask for help in the handling of any function – and I do not need to plan a personal visit at some time in the future or try to talk the user through the actions on the phone. I estimate that this function alone saved me 44 hours only in the last month.

HELPDESK

Intuitive technical support

QUICK ASSISTANCE AND THE OPTIMIZATION OF THE WORK OF THE IT DEPARTMENT

- reducing the costs of technical support and saving the time of IT staff
- reducing the amount of costly downtime and increasing the employees' performance
- personnel education – guides how to handle the most common problems
- minimizing the risk of cyber-attack through software gaps – remote distribution of software, including updates, to multiple workstations at one time
- efficient distribution of important information – messages sent to users with option of obligatory confirmation that the message has been read

DATAGUARD

Control of data access

of Poles declares that they often use private mobile devices for professional purposes. Every fifth person is ready to break the corporate security policy to do so.

Fortinet Report

of companies cannot be sure, where their confidential data are located, and more than half of them worries that the data can be stolen by temporary workers.

Data Security Intelligence Report, performed by Ponemon Institute

As we expected, after the implementation of Axence nVision® the administrators gained knowledge about the devices connected to the network. Thanks to DataGuard, it is possible to define the access rights to selected data media for individual users. Data transferred on USB flash drives are also controlled.

The entire solution is perfect for integration with Active Directory.

DATAGUARD

Control of data access

PROTECTION AGAINST DATA LEAKAGE AND NETWORK INFECTION

- reducing the risk of strategic data leak through the use of portable storage and mobile devices
- protecting the corporate network against viruses automatically installed from flash drives or external storage disks
- saving money and time required to restore lost data
- defining the policy of corporate data transfer by employees together with appropriate authorizations

How can Axence nVision® help you improve IT infrastructure management in your company or institution?
