Axence nVision® Product of the Year by IT Professional magazine, 2012-2020

## We support IT and business departments in creating a secure and efficient IT environment

Since 2005, we have been providing high-quality, user-friendly products while at the same time being involved in promoting digital education and increasing global IT security. We believe that every organization, regardless of its size, and every employee should be certain that their digital tools are both protected and reliable.

### Global reach

Our solutions are used by organizations and companies around the world. We are active globally – from the universities in Canada, steel plants in Mexico, ministries in Ghana and the Philippines to government services in many countries worldwide.

### Dynamic growth

We are constantly developing our software providing new features to cater to our customers' demands. Lots of them have been using nVision for years - we have over 3500 regular customers.

### Community

We create a community of IT administrators – hundreds, and often thousands, of people participate in our projects – online discussions, webinars and conferences. We conducted the National IT Administrators Survey, the results of which were gathered in the Network Avengers Report.

## We are recommended by:

# Discover Axence solutions

## Manage all your IT resources in one place

Tons of hardware, piles of documents, masses of applications with multiple licenses, hundreds of employees – with the Inventory module, you can easily check all the relationships among these items, carry out audits and manage assets from purchases to services and disposals.

## Avoid penalties for illegal software

Knowledge of the software of unknown origin installed on users' computers will allow you to monitor whether anyone in your company is using illegal licenses on an ongoing basis, so high penalties from the courts can be avoided.

## Optimum software expenses

With the Inventory module, you can easily see how many of a specific-type of applications you have ordered are actually used in your organization – save, and pay only for what you need. Similarly, plan the purchases of hardware. You get a complete insight into IT resource usage.

## Optimization

## Secure your remote work

Create a secure remote work environment by connecting to your corporate network using the encrypted TLS 1.2 protocol. Use secure remote access to company resources, technical support a ticketing system, and encrypted chat for all your employees.

## Defend your employees against social engineering

We provide user-level security through the appropriate policies for access to, and the protection of terminal equipment. We support companies in blocking social engineering attacks such as false invoices, suspicious message headers and the detection of untrusted senders, and potentially threatening links and attachments.

## Act in compliance with GDPR

A number of safeguards against information leakage, monitoring data operations, controlling access to sensitive documents and files – to name only some of nVision's solutions that will allow you to meet the GDPR obligations imposed on all organizations.

## IT Security

## Block suspicious websites, applications and media

You can permanently block dangerous websites and prevent the installation of malware to efficiently protect your company from the most popular cyber attacks. Control storage media - you will find out which files have been copied to them and block unauthorized connection.

## Effective work

### Provide professional support to users

Intuitive ticketing system, internal instant messenger, remote access to a user's computer, company knowledge base – these are HelpDesk module functionalities that will help speed up the resolving of technical issues encountered by your employees.

### Identify the biggest distractors

SmartTime reports will provide you with detailed information about the websites and applications or activities that your employees spend most time on. Easy-to-read metrics show the activity divided into productive, neutral and unproductive categories, in line with the policy defined by the company.

### Minimize the cost of failures

The cost of any downtime is mainly dependant on the response time. nVision will immediately inform you of any unavailabilities, server room problems or if key parameters are exceeded on the links. You always get up-to-date monitoring of key safety indicators and parameters.

## Comply with legal requirements with Axence nVision®

### Align the IT department in your organization with the most important provisions of international law

Managers and company owners are legally obliged to ensure data security on pain of administrative penalties, possible civil claims and even criminal sanctions. Axence nVision® has a number of mechanisms to support the compliance with GDPR provisions, ISO standards and other legal standards applicable to IT, both in terms of security, access limitation and accountability for data use. The computer forensics tools made available in nVision will allow you to account for incidents in the event of a data leakage. Data protection is also provided by access control, separation of personal data, encryption and time limits for data storage.

### European Interoperability Framework

Entities carrying out public tasks are obliged to monitor their own IT infrastructure on a permanent and systematic basis. Axence nVision® supports institutions in managing networks, recording hardware and software, reviewing licences, carrying out regular audits, collecting logs, managing updates etc., as required by law. Axence nVision® is widely used in public entities – municipalities, courts and public prosecutors' offices, education, health service and government administration.

### 69% of organizations lost their data

as a result of a deliberate or accidental action of an employee

*Osterman Research*
